

Par Hawaii

Refining in a Clean Energy Paradigm

Lance Tanaka

Director, Government & Public
Affairs

Par Hawaii

Compatibility, Relevance

- Evolve to continue meeting consumers' energy needs
- Effective refining management is about developing *flexibility* rather than trying to guess the future

Liquid Fuels

- Primary form of energy used in commercial transportation for the foreseeable future
- Supportive of State's vision, but for now, petroleum is the fuel to get us to where we want to go
- Agnostic when it comes to feedstock

Proposition

- Par Hawaii is open to partnership opportunities with project developers in Hawaii that can result in producing biofuels at *commercial scale*
