

Biofuels:

At the Crossroads of Food, Fuel, & the Future of Hawaii

Presented By:

Hawai'i ended 150 years of plantation agriculture with the closure of HC&S in January, and is entering a new era with a dual focus on renewable energy generation and local food production. Biofuels is at the intersection between these two trends. What do we want the next 150 years to look like? What do integrated food and fuel systems look like for Hawaii's future? How do we manage priorities between Hawai'i's ambitious 100% renewable electricity goals, diversified agriculture, and economic drivers like tourism? What under the sun do these entities have in common? Come for town-hall style discussion with practitioners from the field and a visual tour of Hawai'i's integrated food and fuel potential, and be prepared to be surprised with new information!

Date: April 3rd, 2017 Time: 1:30 pm – 3:00 pm
Location: Hawaii State Capitol Conference Rm. 225

Agenda:

- 1:00 p.m. SIGN-IN & PROJECT MAPPING
